Why is Patient Engagement important to you?

Q: Why is Patient Engagement important to you?

A: Unfortunately, patient engagement has not been considered for a long time as a basic tenet of health care and way of working within the industry. The R&D-centric, but not patient-centric, healthcare is time for significant changes: all together we can move this forward ensuring the maximum value for people with several medical conditions and their families. Patient-centric healthcare. It’s time for significant changes: all together we can move this forward ensuring the maximum value for people with several medical conditions and their families.

A: Patient Engagement has defined my work and passion. Every patient and advocate is an expert in their experience. Patient Engagement has defined my work and passion. Every patient and advocate is an expert in their experience.

A: What matters most to patients can only be expressed through conversations about their health. Combining the expertise of scientists with the expertise of people living with a disease ensures that people living with a disease have a place at the table in any conversations about their health. Combining the expertise of scientists with the expertise of people living with a disease ensures that people living with a disease have a place at the table in any conversations about their health.

A: We need to consider patient engagement as a fundamental part of the drug development process. We need to consider patient engagement as a fundamental part of the drug development process.

A: We must make sure we develop, approve and put on the market treatments that meet patients’ needs and perspectives. We must make sure we develop, approve and put on the market treatments that meet patients’ needs and perspectives.

A: If we don’t truly value patients’ expertise, we will not truly be able to meet the needs of treatment and cure.

A: Patients have experience living with their medical conditions and have insights to offer that are often not considered by medical researchers. Patients have experience living with their medical conditions and have insights to offer that are often not considered by medical researchers.

A: For me, patients are the experts, not the clinicians. For me, patients are the experts, not the clinicians.

A: When we engage patients and put them at the center of decision-making related to medicines, until patients are at the center of discussions related to what treatments are developed and how they impact quality of life, we will not truly be able to meet the needs of treatment and cure.

A: In my experience of patient engagement, patient’s voice and perspective are taking into account and patients’ experience, preferences and perspectives are being taken into account and patients’ experience, preferences and perspectives are being.

A: It must be a fundamental part of the drug development process. It must be a fundamental part of the drug development process.

A: A key to the success of any drug development is input from patients and those who care for them! Building a framework is important to guide R&D in changing the way we work by partnering with patients.

A: I believe that people with a specific condition and their caregivers should have a place at the table in any conversations about their health. I believe that people with a specific condition and their caregivers should have a place at the table in any conversations about their health.

A: It will move forward the field of patient engagement. It will move forward the field of patient engagement.
